Saving 2 hours a day for the sales reps of a major toy retailer

Automating repetitive tasks

Higher downstream productivity

MATHIS MAITRALLIN | 2026

Initial task

Each sales rep must constantly manage the stock of their various stores, with two goals:

- avoid running out of products that sell well
- avoid overstocking products with low demand

Process before automation

5 steps to repeat manually for each store: 2 hours of manual work per store.

1. RETRIEVE THE ORDER FILE FROM YEAR N-1
2. ASK THE STORE FOR ITS CURRENT STOCK
3. ANALYZE SALES FOR EACH PRODUCT FROM YEAR N-1
4. ESTIMATE THE STORE'S NEEDS FOR YEAR N
5. ADD THE NEW PRODUCTS

Process automation

Building a Streamlit app

GOAL Automation

TO DO Upload the sales and stock files

RESULT

All the manual work is done automatically

Automatic order suggestion for each product

Process after automation

Average time saved per store: 1 hour
A sales rep runs this process
about twice a day on average, so this
work saves 2 hours a day.

1. OPEN THE APP
2. UPLOAD THE SALES AND STOCK FILES
3. RETRIEVE THE AUTOMATION'S OUTPUT
4. ADD THE NEW PRODUCTS

App preview

	Référence fabricant	Stock article	Nombre d'UV vendues	Commande	Suggestion commande
1	5573	14	19	☑	5
2	5653	0	20	☑	20
3	5655	2	2	☐	0
4	9322	2	16	☑	14
5	9462	8	14	☑	6

Thank you for your attention
